Kapci 100 1K Undercoat

Product description

Kapci 100 is 1K polyvinylchloride-epoxy based undercoat designed to protect car underbody from stone chipping and corrosion. It can be also applied over the body floor and other metal parts. Kapci 100 gives anticorrosion properties, excellent adhesion and chemical resistance.

Suitable substrates

Kapci 100 undercoat should be applied over rust free and degreased bare metal. For longer resistance to corrosion it is recommended applying any Kapci anticorrosive primer (Kapci 810/Kapci 850/Kapci 880) prior to undercoating with Kapci 100.

These products are for the professional painting of automotive vehicles only after reference to the manufacturer's Material Safety Data Sheets
